Visit Notes								
No.	Description							
1	A sample of installation a door frame at ground floor-zone "A" was observed. Eng. Natheer advised the Contractor to the right method of installation and stressed to follow the architectural workshop drawing, the direction of the door opening, the verticality and the connection with the blockwork and plastering.							
2	The plastering work was inspected and observed that the work in this item is acceptable in general and the Contractor is already using the required accessories. Defects have been observed in some areas in ceilings in particular due to thicker places executed wrongly. The Contractor was instructed to rectify those defects in the right procedures with the follow up of supervision staff.							

3	Roughness was observed in number of columns in the ground floor-zone "A" as a result of the visual check. The Contractor was requested to rectify the observed defects using the approved repair materials.
4	A visual inspection was conducted on the delivered quantities of building stones and the Contractor was reminded with number of remarks related to the compliance of stones.
5	The built stone courses-zone "A" have been inspected and show that the work in general is acceptable except limited area where the Contractor was requested to remove and replace two courses using the right method in building including the use of metal accessories.
6	Concrete casting for roof-zone "B" and formwork striking for third floor slab- zone "B" have been inspected.
7	A defect was observed in the stone soffit of one window related to deviation in the width of joints between stones, number of joints are over the specified width of 1 cm.
8	The visitors witnessed a safety tool box briefing for the project workers which was presented by Supervision safety officer.
9	Despite our written instructions the Contractor is not using a special container for mixing the mortar used for blockwork and plastering work.
