

Our Notes

Aluminum Works

SECTION 08520

Aluminum works is a complete system designed by specialized international companies so that the system includes sections, the method of their installation and their accessories, whether these accessories are produced by the same company or by other companies approved to comply with the manufacturer's system.

The main companies in Jordan that carry out aluminum work are accredited agents for international companies, and therefore we believe that the approved list should be determined for the names of the global systems that have manufacturing agents in Jordan, and therefore the system is approved as a whole provided that it conforms to the required specifications, including all details and accessories.

What was mentioned in (SKEP III) contract's documents defines a list of local manufacturers, and this gives the opportunity for any local manufacturer to choose a mixture of sections, details and accessories in an aggregate manner at the lowest possible costs.
