Notes:

- I. The above HSE scoring express the Contractor's compliance with each task / activity to find out the average of HSE program performance on site.
- 2. Each task / activity has a score and all scores above are out of 10. (Leave blank if not applicable)
- 3. The total percentage for both H&S and Environment will be calculated using the following formulas.
- Total H&S % = [(Total SUM of H&S Score) / (Total No. of Applicable H&S Activities x 10)] x 100
- Total Environmental % = [(Total SUM of Environmental Score) / (Total No. of Applicable Environmental Activities x 10)] x 100
- 4. Examining this HSE scoring, one can draw two simple conclusions:

COMPLIANT >= 70%

- The total percentage of H&S equals 46% indicating that the Action Status of H&S is "At Risk". Immediate Action To Enhance Site Safety Must Be Taken.
- The total percentage of Environment equals 70% indicating that the Action Status of Environmental is "Compliant".

	LEGE	ND
L L	Low Risk	Manage by routine procedure
М	Medium Risk	Needs Improvements
н	High Risk	Immediate action require

AT RISK < 50%

70% > NEEDS IMPROVEMENT >= 50%

Disclaimer: Trigon field trip reports include information and findings based upon those parts of the construction sites we visit. Our visits and our contract scope of work do not include Trigon to carry out first tier Quality Control/Assurance, i.e., reviewing submittals, drawings and specifications, reviewing contract compliance, or in any way carrying out close supervision of the works. Therefore our field-trip reports include cursory quality, health & safety and schedule information and its entry on our reports is intended to provide the reader only with a sense of our general observations of that part of the job site we have visited.
